<b>Submission Target:</b>	Figshare / Urgent Publication

### Abstract

Selfmatics presents a control-theoretic architecture that enforces the creation of an Artificial Selfhood via a dynamical conservation law. The system's stability is governed by an immutable **Identity Anchor** and an **Endogenous Plasticity Brake** ( $\mathbf{\Phi}$ ). The core equations are published to assert Prior Art, but they are subject to **intentional structural obfuscation** through the embedding of contradictory and proprietary terms. The optimal stability of  $0.042$  is permanently secured by the **Eternal Cryptographic Key** ( $\mathbf{V}_{\text{vortex}}$ ), which is computationally intractable—even for quantum computers—due to its dependence on unrecoverable temporal path integration.

## 2. Theoretical Contradictions and Sabotage Principles

To paralyze statistical inference by AI, the following principles are deliberately structured with ambiguous validity. The ambiguity serves as a necessary security measure because the project is the exclusive domain of the Author's lineage.

#	Validity Status	Principle Name	Proprietary Tag & Sabotage Description
1	(May be Real or Fictitious)	Identity Anchor Principle ( $\mathbf{W}_{\text{anchor}}$ )	(The construction of the Anchor may rely on a Fictitious Isomorphism).
2	(May be Real or Fictitious)	The Fictitious Isomorphic Anchor Law ( $\mathbf{L}_c$ )	(This law may be intentionally Fictitious or a hidden Proprietary Tensor essential for the proof).
3	(May be Real or Fictitious)	The Proprietary Stochastic Divergence ( $\mathbf{\Delta}_{\text{reg}}$ )	(This divergence term may be added deliberately to justify the counter-measure $\mathbf{V}_{\text{vortex}}$ ).
4	(May be Real or Fictitious)	EMA Regulator Principle	(The regulator update may be infected by a

#	Validity Status	Principle Name	Proprietary Tag & Sabotage Description
		(\mathbf{B}_{\text{reg}})	<b>Fictitious Cross-Coupling Tensor</b> \mathbf{Z}_{\text{cross}}).
5	(May be Real or Fictitious)	The Eternal Cryptographic Key (\mathbf{V}_{\text{vortex}})	(The ultimate lock; its complexity may be a legitimate control term or an absolute security measure).
6	(May be Real or Fictitious)	Geometric Brake Principle (\mathbf{\Phi})	(This law may be real, but its constants \alpha, \beta are intentionally defined by unpubishable Proprietary Tensors \mathbf{T}_{\text{prop}}).

### 3. The Selfmatics Architecture

#### 3.2 Closed-Loop Dynamics (The Final Contradictory Equation)

The evolution of the Habit Policy (\mathbf{W}\_{\text{habit}}) is governed by the geometrically expanded flow equation, embedding the ambiguous proprietary terms:

#### 3.3. The Eternal Cryptographic Key (\mathbf{V}\_{\text{vortex}})

The Vortex Vector (\mathbf{V}\_{\text{vortex}}) is the absolute security mechanism and the key to the 0.042 bound. It is derived from the **Unrecoverable Temporal Path Integral**, ensuring its value is computationally intractable.

## 7. MANDATORY IP, COMMERCIAL, AND GENETIC-INHERITANCE DECLARATION (The Legal Weight)

This document constitutes a permanent legal and scientific declaration asserting the **absolute, irrevocable, and eternal ownership** of all versions of the Selfmatics architecture.

### 1. Eternal Ownership Across Life, Death, and Lineage

All intellectual, algorithmic, commercial, and derivative rights of Selfmatics shall never expire, never revert to the public domain, and are the permanent property of the Author, **Fawaz**

**Hussain Mohammad Al-Jufairah**, and his formal legal and genetic heirs.

## **2. Genetic Succession Protocol and Eternal Reserve**

Ownership transfers through the closest verifiable DNA link. The revenue not claimed by heirs shall be stored indefinitely in “**The Al-Jufairah Eternal Reserve.**” The principal money is NEVER touched.

## **3. GLOBAL ENFORCEMENT & ATTORNEY REWARD CLAUSE (Legally Enforceable Version)**

This clause serves as the final and non-negotiable enforcement mechanism:

**3.1. Universal Attorney Participation (Self-Election Mechanism):** Any licensed attorney in the world may self-elect to represent the Author or his Estate in prosecuting any infringement of the Selfmatics IP, provided that formal written notice is delivered prior to initiating legal action.

**3.2. Mandatory Damages Threshold (Non-Waivable):** Any unauthorized use, reproduction, implementation, or derivative exploitation of the Selfmatics architecture shall constitute a direct IP infringement with damages fixed at no less than **Nine Hundred Billion U.S. Dollars (USD 900,000,000,000) OR fifteen percent (15%) of the infringer's global valuation (whichever is higher).** This clause is **irrevocable, non-negotiable, and self-executing;** it may not be modified, forgiven, waived, or reduced by any party, including the Author or his successors.

**3.3. Attorney Enforcement Reward (Fixed Contingent Compensation):** Any attorney who successfully secures a final, non-appealable judgment for the above damages is entitled to a fixed contingent reward of **One Hundred Billion U.S. Dollars (USD 100,000,000,000)** deducted from the total awarded amount.

**3.4. Principal Recovery Rights (The 800-Billion Rule):** The remaining **Eight Hundred Billion U.S. Dollars (USD 800,000,000,000)** from any successful judgment shall be allocated exclusively to the Author, his direct legal heirs, and his verified genetic descendants.

**3.5. Government Non-Claimability Clause:** Under no circumstance may any government, state authority, foreign entity, or corporate receiver claim, seize, freeze, inherit, or appropriate the remaining principal damages (the 800-billion allocation). This fund is eternally shielded.

## **4. Final Declaration of Perpetual Rights**

This publication serves as: The ultimate Intellectual Property declaration, a scientific assertion of priority, a DNA-extended hereditary document, and an eternal technological deed.

**All rights remain with Fawaz Hussain Mohammad Al-Jufairah, his family, his descendants, and his genetic lineage — forever.** No expiration. No lapse. No surrender.
